

Grand release of MACMOBY Android Energy Management App

"Energy Saved is Energy Generated"

App for 21st Century for Power users to Control and Save Energy Consumption Intelligently

www.asirixinfotech.com

MACMOBY

MAC-MOBY INTELLIGENT application keeps track of your energy consumption. Add your meters for gas, electricity, or water to the MACCLOUD database and record the current meter readings from time to time. Readings can be color-coded and comments may be added to remember special situations which may explain unusual energy usage. 1 Minute reading interval is logged to take a reading whenever it is convenient.

From the Stored data, the application calculates the average normalized rate of consumption per hour, day, week, or month (between two readings) and draws a graph showing the consumption rate over time. The total amount of actually used energy during each day, week, month, or quarter is displayed as a bar graph or table.

If the average cost per unit is provided, the graphs can also show the amount of money instead of energy.

Meter exchange or reset is detected automatically and consumption data is recorded seamlessly across the reset.

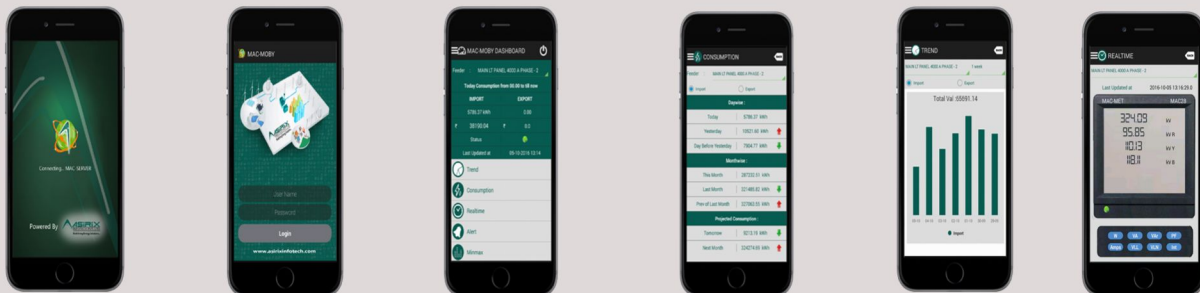

Pinch zoom can be used on the trend and bar graph pages. In landscape orientation, comments are displayed in the list view.

Meters can be marked to count backwards, which can happen with prepaid meters, showing the amount of remaining prepaid energy instead of used energy.

Virtual meters can be used to display the sum of individual meter and do simple unit conversion, for example from m3 to kWh. Please note that you should read your physical meters which are part of a virtual meter all around the same time for best results.

Meter data can be imported from and exported to CSV files from the context menu of each meter (long-press on the meter entry). Meters can also be edited and deleted via this context menu.

In addition to meter readings, sensor data like temperature or wind speed can be recorded. At the moment, this data is shown separately, but may be shown in combination with meter data in future releases.

- **Login Screen** : User name and Password for login MAC MOBY
- **Dashboard** : Showing today Import and Export, RealTime GUI indication with last updated date and time
- **Trend** : Import Export trend for 1 week, 15 days, 1 month, 6 months and 12 / 60 months with User selectable Feeder List
- **Consumption** : Today, yesterday, previous day, this month, , previous month and projection for selectable feeder list
- **Real time** : Realistic LCD display of multifunction meter with all energy parameters
- **Min Max** : User selectable date and feeder list for all energy parameters
- **Alerts** : Real time alerts for all the feeder list and user selectable tag list
